## Assessment of the nasal bone

Dear walter insegno,

Thank you for submitting your logbook of 3 images. I examined each image for the following criteria: magnification (head and thorax only), true mid-sagittal section, correct angle between the ultrasound transducer and the nose, and your assessment (see table below).

<i>Criteria</i>	<i>Image number</i>		
	<i>1</i>	<i>2</i>	<i>3</i>
Magnification	✓	✓	✓
Mid-sagittal section	✓	✓	✓
Transducer parallel to the nose	✓	✓	✓
User's assessment	✓	✓	✓

*Legend:* ✓ = pass ✗ = fail -- = not possible to assess

Your images are satisfactory. Your software license will include the assessment of **nasal bone** in the risk calculation for chromosomal abnormalities and your name will appear on the list of sonographers certified for nasal bone assessment.

Best wishes,

Olga Torres Khoury
